

The MIT Center for Digital Research is proud to announce the publishing of an e-book by Erik Brynjolfsson and Andy McAfee entitled *Race Against the Machine: How the Digital Revolution is Accelerating Innovation, Driving Productivity, and Irreversibly Transforming Employment and the Economy*. In this e-book, the authors argue that the current serious problems in the labor force - a jobless recovery, median incomes that aren't rising, and so on - are due not to a lack of innovation in the economy, but instead to an abundance of it. Digital technology is racing ahead so quickly, in short, that it's leaving the average worker behind. Erik and Andy highlight recent amazing technical advances (cars that drive themselves, computers that beat the best Jeopardy! players, etc.), discuss their economic implications, and present policy recommendations. It is a short read and hopefully a lively one. And because we wanted to get the ideas out quickly, it's an ebook only, at least for now. Please feel free to order the e-book through Amazon .

Comments and discussions can be posted on our new Online Community which goes live on Halloween!
